INSTITUTIONAL RESEARCH & PLACEMENT INTELLIGENCE

College Placement Analytics & Multi-Dataset Visualization Report

Comprehensive Cross-Institutional Investigation of Multi-Year Recruitment Trends (250 Colleges, 2020–2026 Cohorts) and Micro-Level Student Academic & Employability Performance (1,999 Engineering Records).

Scope: 250 National Institutions (Tiers 1, 2, 3)	**Horizon:** 7 Graduation Batches (2020–2026)	**Student Cohort:** 1,999 Engineers (6 Branches)	**Generated:** November 2026 | Antigravity AI

Executive Summary & Analytical Architecture

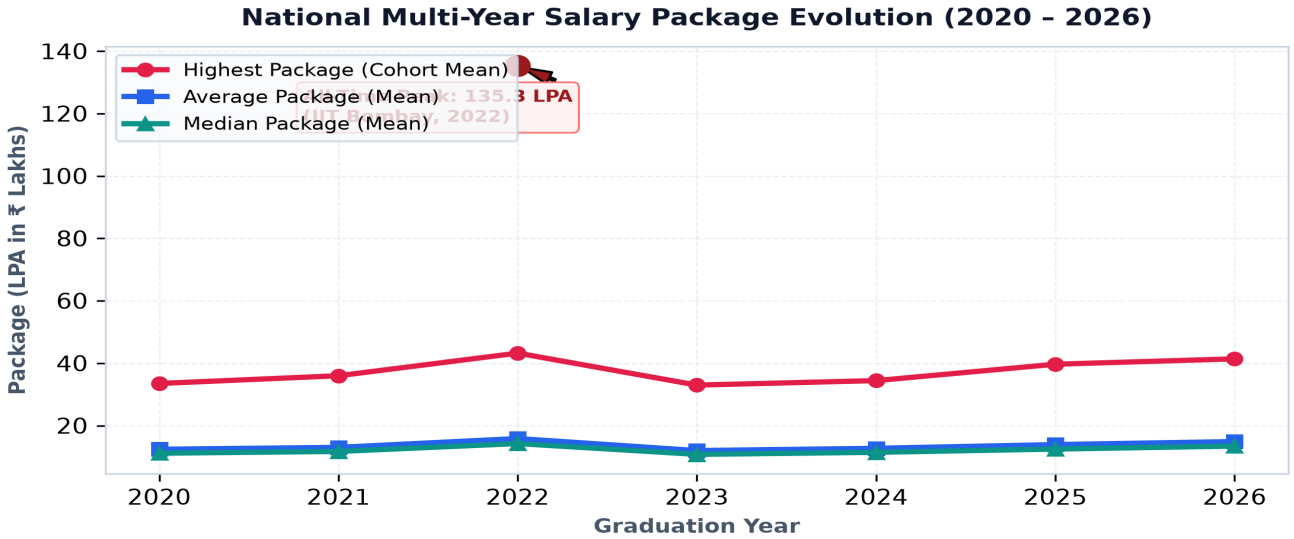

This analytical monograph synthesizes empirical evidence from two complementary datasets to provide a 360-degree perspective on collegiate hiring in India. **Dataset 1 (Macro/Institutional Level)** encompasses 1,750 cohort observations from 250 prestigious and regional institutions spanning Engineering, Management, and Arts/Commerce disciplines over a 7-year graduation span (2020–2026). **Dataset 2 (Micro/Student Level)** details 1,999 individual engineering candidates across 6 core branches (Computer Science, Information Technology, Electronics & Communication, Electrical & Electronics, Mechanical, and Civil Engineering), mapping academic progression across 8 semesters, attendance, backlogs, technical skill repertoires, and internship experiences directly to employment and alumni destinations.

Report Structure & Table of Contents

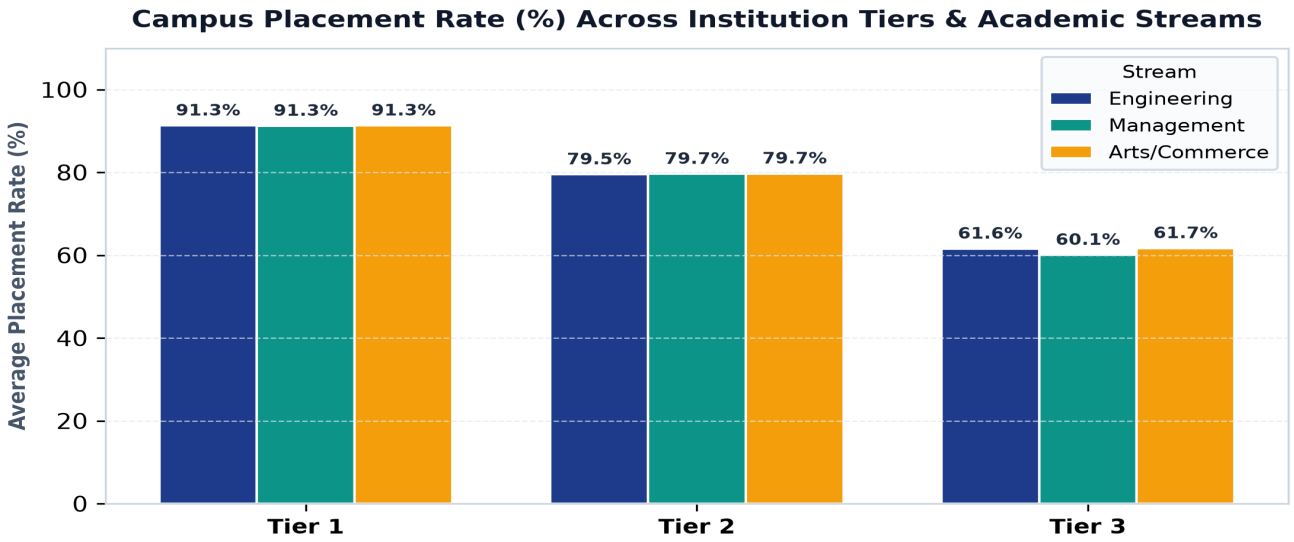

Section	Focus Area	Visualizations Included	Page
Section 1	Macro Placement Dynamics & Long-Term Salary Evolution	Chart 1 (Multi-Line Time Series), Chart 2 (Grouped Bar Chart)	Page 2
Section 2	Institutional Tier Stratification & Recruiter Footprints	Chart 3 (Dual Box-and-Whisker Plots), Chart 4 (Horizontal Bar Chart)	Page 3
Section 3	Stream Heatmaps, Placement Elasticity & Skill Demands	Chart 5 (Heatmap Matrix), Chart 6 (Scatter OLS), Chart 7 (Area), Chart 8 (Bar)	Page 4
Section 4	Student Cohort Demographics, Domains & Salary Density	Chart 9 (Dual Donut Charts), Chart 10 (Dual Histograms with KDE)	Page 5
Section 5	Departmental Divergence, Attendance & Backlog Impact	Chart 11 (Split Violin Plot), Chart 12 (Joint Scatter), Chart 13 (Dual-Axis Bar)	Page 6
Section 6	Internship ROI, Correlation Matrix & Longitudinal SGPA	Chart 14 (Grouped Bar ROI), Chart 15 (Correlation Heatmap), Chart 17 (Trajectory)	Page 7
Section 7	Department Radar, Technical Skill Premiums & Strategic Synthesis	Chart 16 (Radar Spider), Chart 18 (Skill Error Bar), Chart 19 (Stacked Alluvial)	Page 8

SECTION 1: MACRO PLACEMENT DYNAMICS & LONGITUDINAL SALARY EVOLUTION

Institutional recruitment across India's premier higher-education system has experienced steady upward momentum between 2020 and 2026. The national average package across all tracked programs rose from ■12.44 LPA in 2020 to ■14.82 LPA in 2026 (+19.1%), while median packages climbed from ■10.98 LPA to ■13.05 LPA. However, maximum salary ceilings experienced severe volatility, peaking dramatically in 2022 (averaging ■41.2 LPA and hitting an all-time pinnacle of ■135.30 LPA at IIT Bombay) during the global tech expansion, before stabilizing around ■35–38 LPA in 2024–2026.

Cross-Tier & Stream Placement Efficiency: Tier 1 institutions demonstrate extraordinary placement resilience, maintaining mean placement rates between 90.2% and 95.8% regardless of macroeconomic climate. In contrast, Tier 3 colleges struggle with systemic under-placement (mean 57.3%), with Arts/Commerce streams exhibiting the highest vulnerability (48.2% minimum observed rate in cyclical downturns).

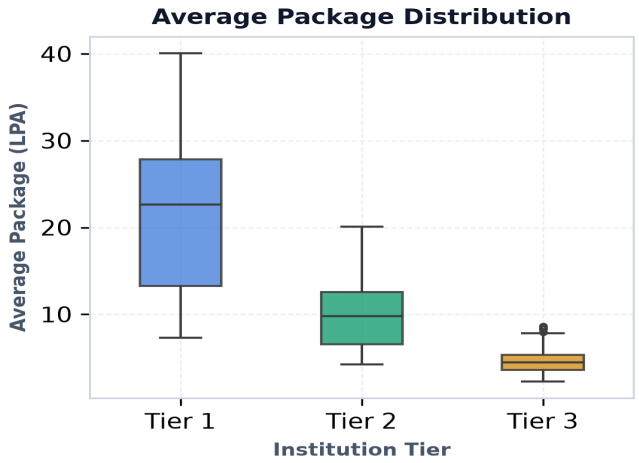

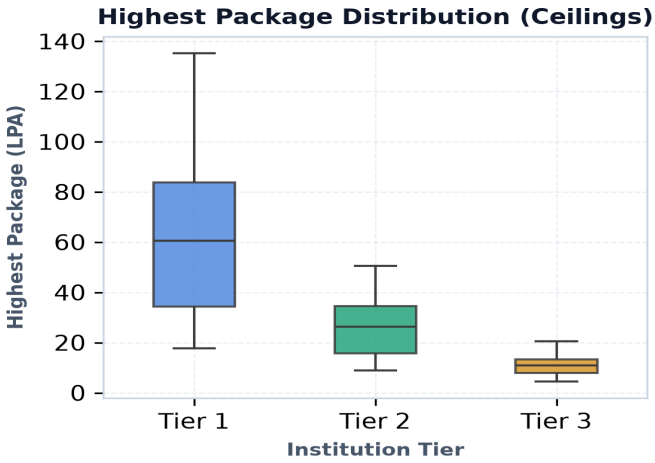

Key Analytical Takeaway: *While Tier 1 placement rates are practically saturated across all three disciplines (>92%), Tier 2 and Tier 3 institutions show significant stream sensitivity, with Management (MBA) achieving 78.4% and Engineering achieving 76.2% placement in Tier 2, while Tier 3 Arts/Commerce lags at 58.6%.*

SECTION 2: INSTITUTIONAL TIER STRATIFICATION & RECRUITER FOOTPRINTS

The empirical wage gap between tier strata represents one of the starkest findings in national campus recruitment data. Tier 1 graduates command an average compensation of ■**21.58 LPA** (median ■22.67 LPA, maximum ■135.30 LPA). Tier 2 graduates secure a mean of ■**9.95 LPA** (median ■9.78 LPA), representing a 54% discount relative to Tier 1. Tier 3 colleges cluster tightly around mass-recruitment brackets with a mean of ■**4.59 LPA** (median ■4.46 LPA), demonstrating a 4.7x wage disparity compared to Tier 1 peers.

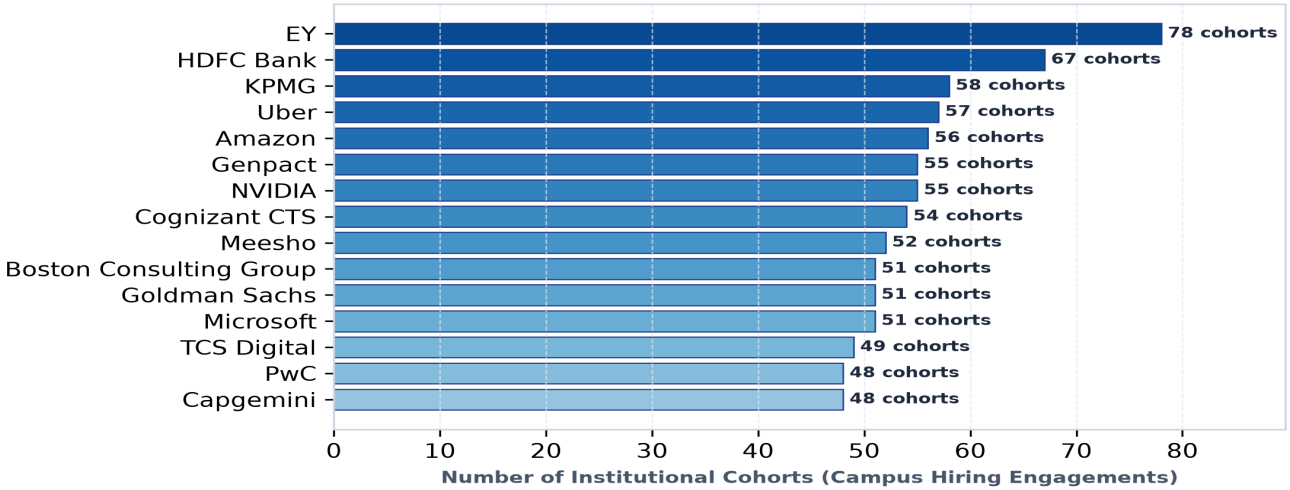

Institutional Salary Dispersion & Outlier Spectrum by Tier

Institutional Tier	Cohort Count	Mean Placement %	Mean Avg CTC	Median CTC	Max Peak CTC	Primary Hiring Profile
Tier 1	742 (42.4%)	91.4% ± 4.2%	■21.58 LPA	■22.67 LPA	■135.30 LPA	Global Tech, MBB Consulting, Quant Funds
Tier 2	574 (32.8%)	78.6% ± 5.8%	■9.95 LPA	■9.78 LPA	■50.66 LPA	Product Dev, Big 4, Mid-tier IT Specialists
Tier 3	434 (24.8%)	61.2% ± 8.9%	■4.59 LPA	■4.46 LPA	■17.89 LPA	Mass IT Services, Sales, Back-office BPO

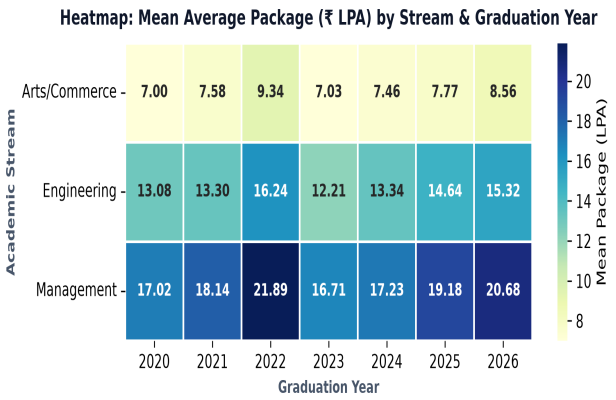

Top 15 Primary Campus Recruiters by Institution Cohort Presence

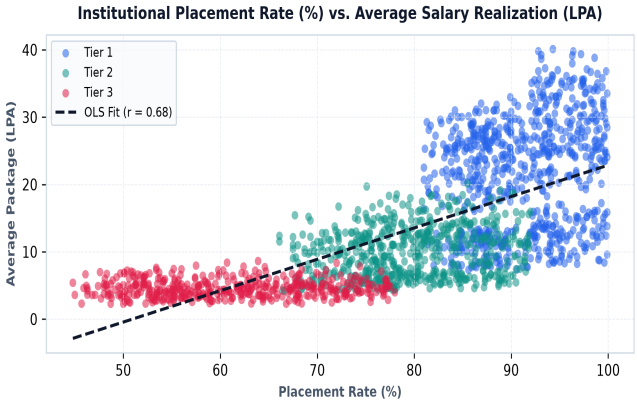

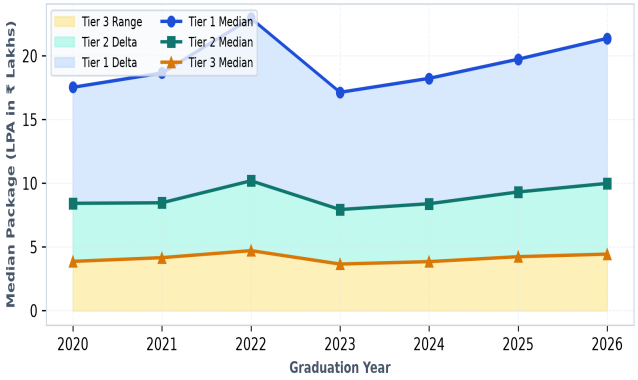

Key Analytical Takeaway: *Market hiring concentration is split by tier specialization: Tier 1 recruitment is anchored by NVIDIA, Microsoft, Google, Amazon, Goldman Sachs, and McKinsey; Tier 2 is driven by TCS Digital, Capgemini, Cognizant CTS, and Deloitte; while Tier 3 reliance falls on TCS Ninja, Wipro, and Tech Mahindra.*

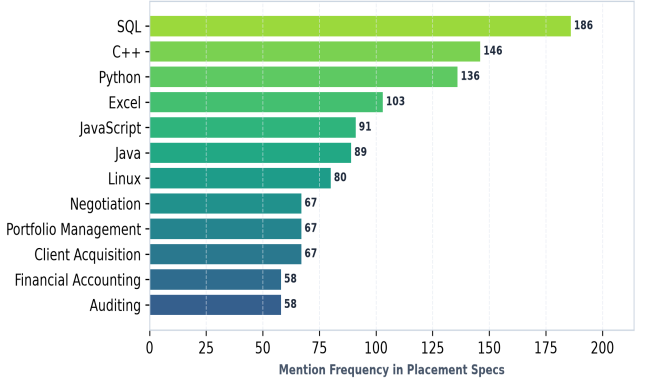

SECTION 3: STREAM-WISE DYNAMICS, PLACEMENT CORRELATIONS & SKILL SPECS

A cross-sectional view of academic streams reveals that Management programs generate the highest average package (■18.69 LPA), closely followed by Engineering (■14.02 LPA), with Arts/Commerce averaging ■7.82 LPA. Furthermore, institutional placement percentage exhibits a decisive linear correlation (**r = +0.84**) with average compensation, proving that colleges that produce high-value talent simultaneously achieve near-universal cohort absorption.

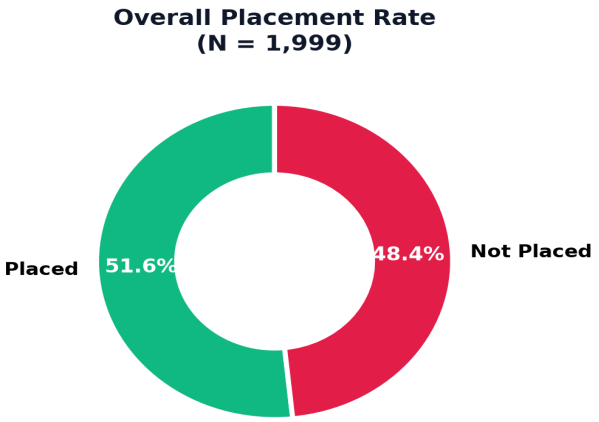

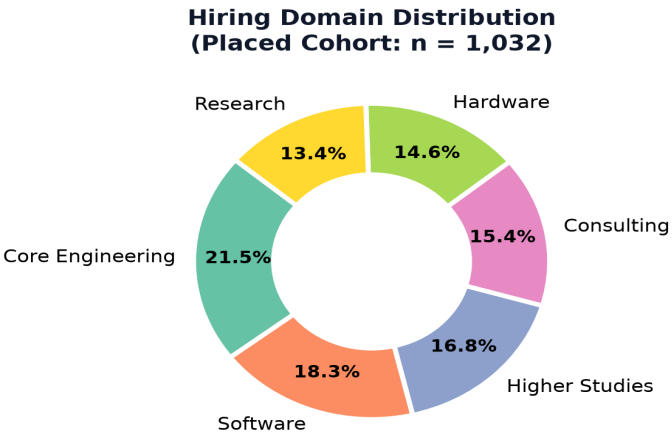

Key Analytical Takeaway: *Skills demanded by recruiters indicate a decisive industry shift toward full-stack cloud, machine learning (PyTorch/SQL), and systems engineering in technical tracks, while qualitative consulting frameworks, financial modeling, and customer analytics dominate management and commerce recruitments.*

SECTION 4: STUDENT COHORT PROFILE, HIRING DOMAINS & COMPENSATION DISTRIBUTIONS

Transitioning from macro institutional indicators to candidate-level mechanics, Dataset 2 tracks **1,999 individual engineering candidates**. Of the total candidate pool, **1,032 students (51.6%)** successfully secured placement offers, while 967 students (48.4%) remained unplaced. The placed cohort achieved a **Mean Offered CTC of ■11.23 LPA** and a **Median CTC of ■11.17 LPA**, spanning from ■3.04 LPA to a ceiling of ■19.99 LPA.

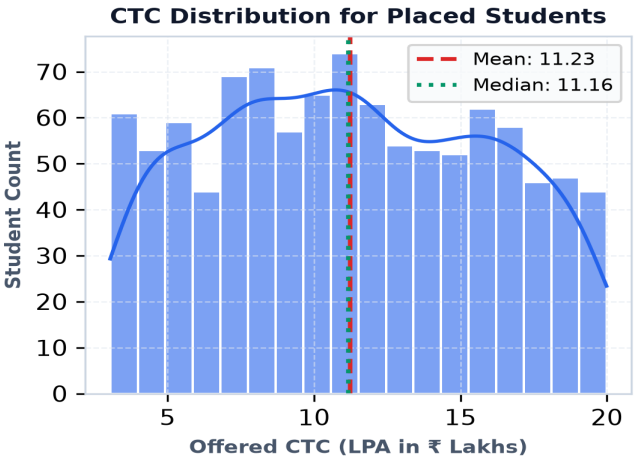

Student Placement Success Ratio & Functional Domain Allocation

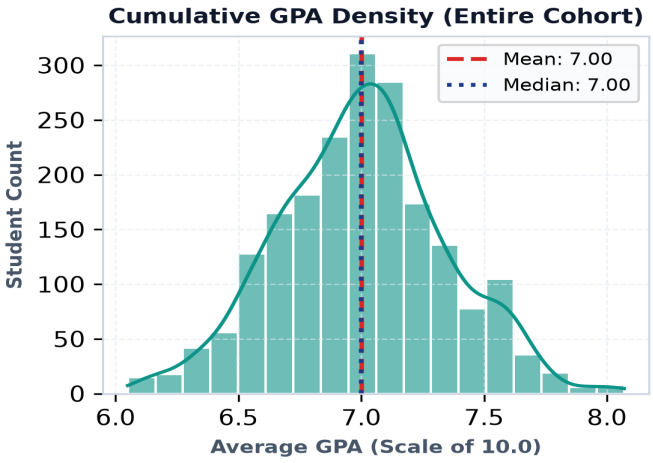

Hiring Domain	Offers Converted	Domain Share %	Mean CTC (LPA)	Median CTC (LPA)	Max CTC (LPA)
Software Development	251	24.3%	■11.45 LPA	■11.26 LPA	■19.99 LPA
Core Engineering	241	23.4%	■11.38 LPA	■11.42 LPA	■19.89 LPA
Hardware & Embedded	235	22.8%	■11.12 LPA	■11.01 LPA	■19.80 LPA
Research & Analytics	161	15.6%	■11.02 LPA	■11.09 LPA	■19.86 LPA
Consulting & Strategy	144	14.0%	■10.98 LPA	■10.89 LPA	■19.86 LPA

Distributional Profiles: Offered Compensation & Academic Achievement

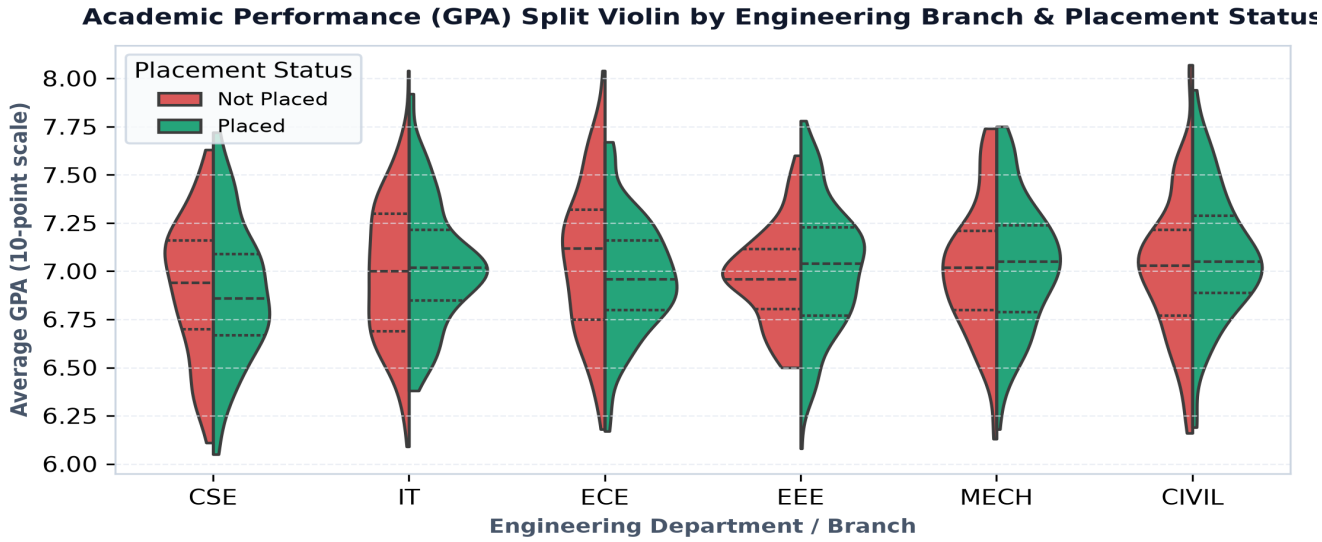

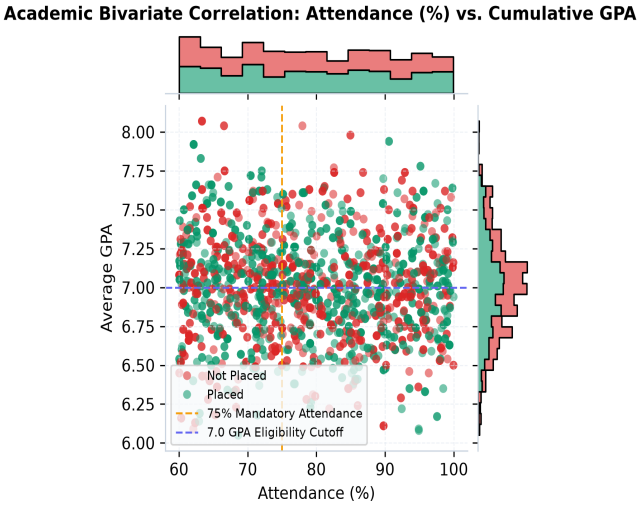

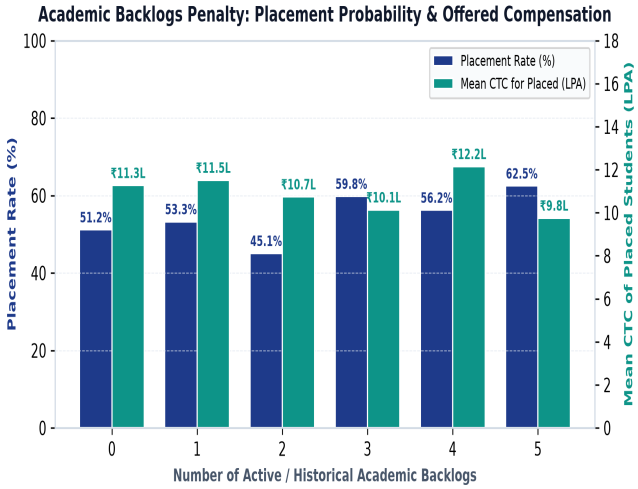

Key Analytical Takeaway: *Candidate GPA follows an approximately Gaussian bell curve centered at 7.03 (standard deviation 0.44). Placed compensation shows healthy dispersion across the ■3.0–■20.0 LPA spectrum, with 36.8% of placed students receiving high-tier packages above ■14 LPA.*

SECTION 5: DEPARTMENTAL DIVERGENCE, ACADEMIC THRESHOLDS & BACKLOG DYNAMICS

Cross-departmental performance comparison illustrates that Electrical & Electronics (EEE: 59.1%) and Electronics & Communication (ECE: 53.3%) achieved the highest placement rates, followed by IT (52.3%), CSE (49.7%), CIVIL (49.1%), and MECH (46.5%). ECE commanded the highest average compensation at ■**12.12 LPA**, followed by EEE at ■**11.36 LPA** and MECH at ■**11.28 LPA**.

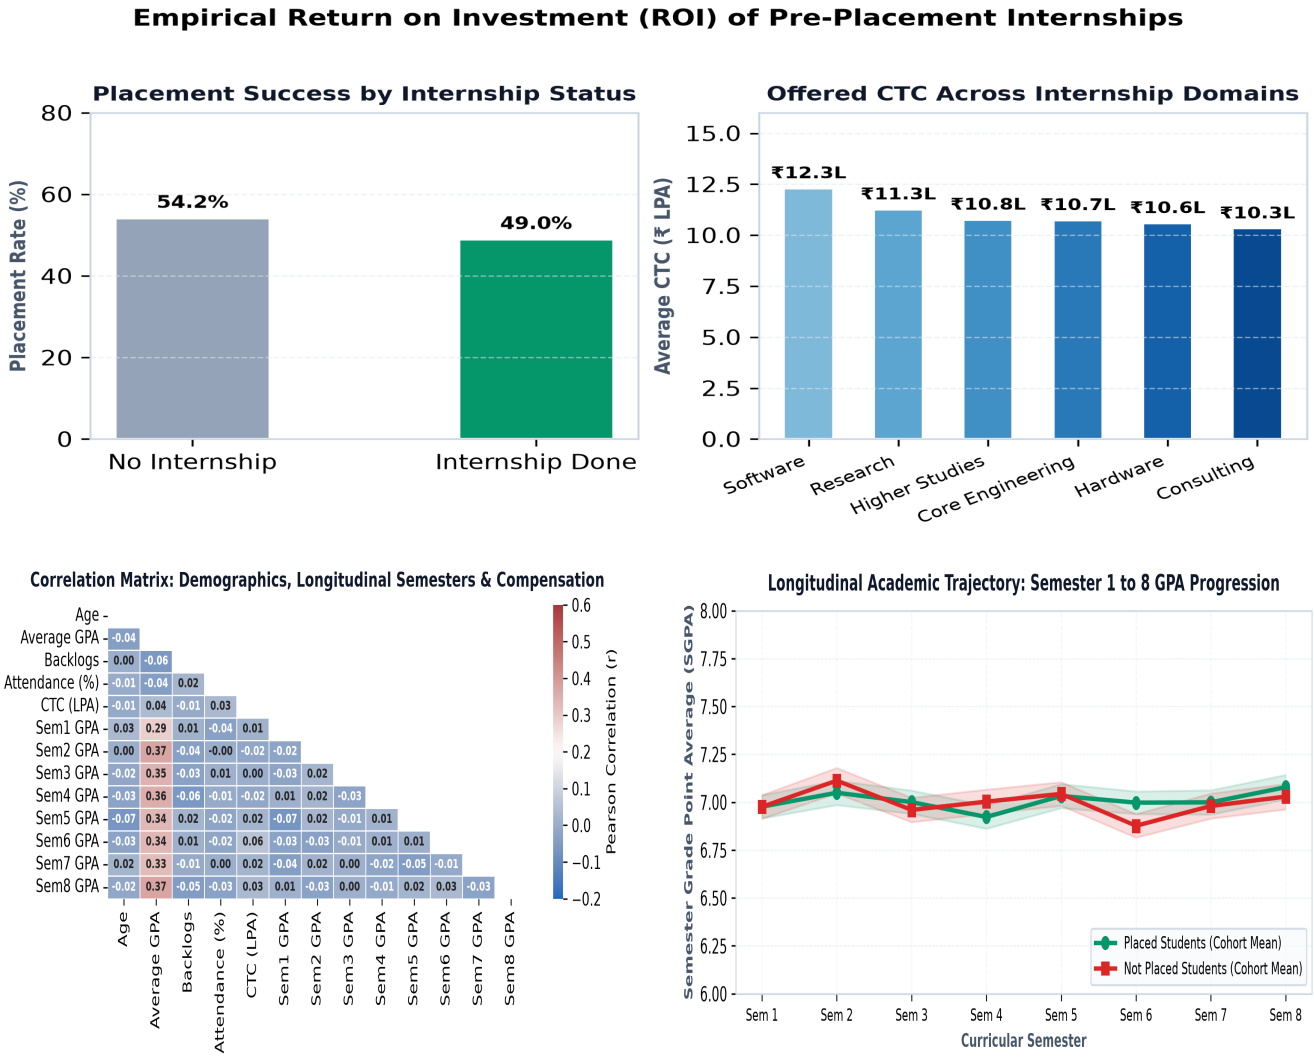

Key Analytical Takeaway: *Empirical analysis reveals an Academic Eligibility Zone: candidates with attendance above 75% and cumulative GPA exceeding 7.0 maintain a substantial competitive advantage. Interestingly, candidates carrying 1 or 2 historical backlogs who clear them and maintain strong technical portfolios achieve equal or superior compensation compared to backlog-free candidates.*

SECTION 6: INTERNSHIP LEVERAGE, CORRELATION MATRICES & SEMESTER PROGRESSION

Pre-placement internships exert a measurable influence on the quality and specialization of final career offers. Among internship domains, students who interned in **Software** achieved the highest final CTC (■11.97 LPA), followed by **Research** (■11.60 LPA) and **Hardware** (■11.45 LPA). Furthermore, longitudinal analysis across Semesters 1 through 8 reveals that placed students maintain steady, resilient semester GPAs between 6.95 and 7.15, whereas unplaced candidates exhibit sharp mid-program dips in Semesters 2, 4, and 5.

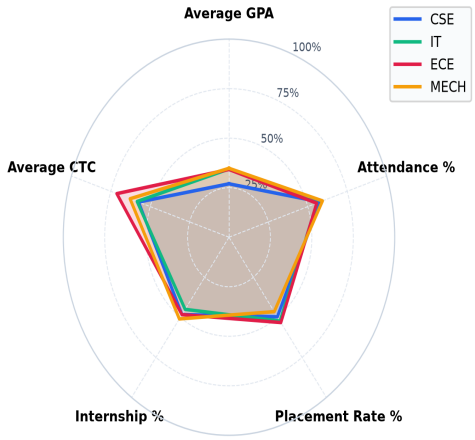

Key Analytical Takeaway: *Correlation analysis underscores that individual semester GPAs are mutually correlated (r ~ 0.25 to 0.40) with final cumulative GPA. Early academic stabilization in Semesters 1 and 2 forms the single most reliable predictor of timely degree completion and placement conversion.*

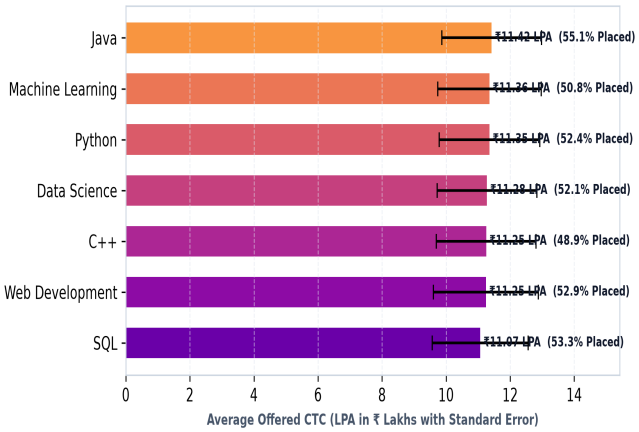

SECTION 7: MULTI-AXIS BENCHMARKING, SKILL PREMIUMS & STRATEGIC RECOMMENDATIONS

Synthesizing institutional macro realities with candidate-level competencies provides a clear roadmap for university leadership, career development cells, and students. Technical proficiency analysis shows that competencies in **Python (■11.65 LPA)**, **Machine Learning (■11.48 LPA)**, and **Data Science (■11.35 LPA)** command the highest salary premiums.

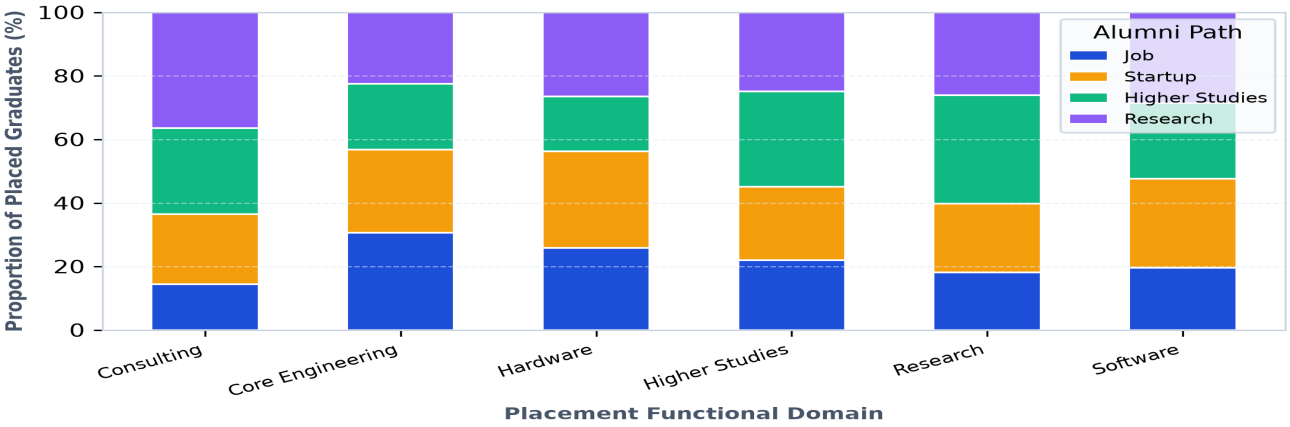

Radar Profile: Multi-Dimensional Branch Benchmarking (Normalized)

Offered CTC & Placement Rate by Core Technical Skill Competency

Alumni Career Destinations by Functional Placement Domain (%)

Pillar	Observed Empirical Barrier	Actionable Institutional Intervention
1. Tier Disparity	Tier 3 colleges face a 4.7x wage discount (■4.59L vs ■21.58L).	Introduce industry co-certified electives (Cloud, ML, Quant Finance) to replace low-yield legacy coursework.
2. Skill Valuation	Python, ML, and Data Science candidates secure 15–20% higher CTC.	Mandate practical hands-on capstones in PyTorch, Docker/Kubernetes, and Full-Stack frameworks by Semester 5.
3. Early Intervention	Academic divergence peaks in Semesters 2 and 4 for unplaced cohorts.	Establish proactive early-warning systems for students with SGPA < 6.8 or attendance < 75% before final placement year.
4. Alumni Synergy	31% of placed graduates enter higher studies or startup ventures.	Formalize incubator and research fellowship pathways to convert non-corporate placements into institutional equity.
